Diagnostic et traitement des pubertés précoces

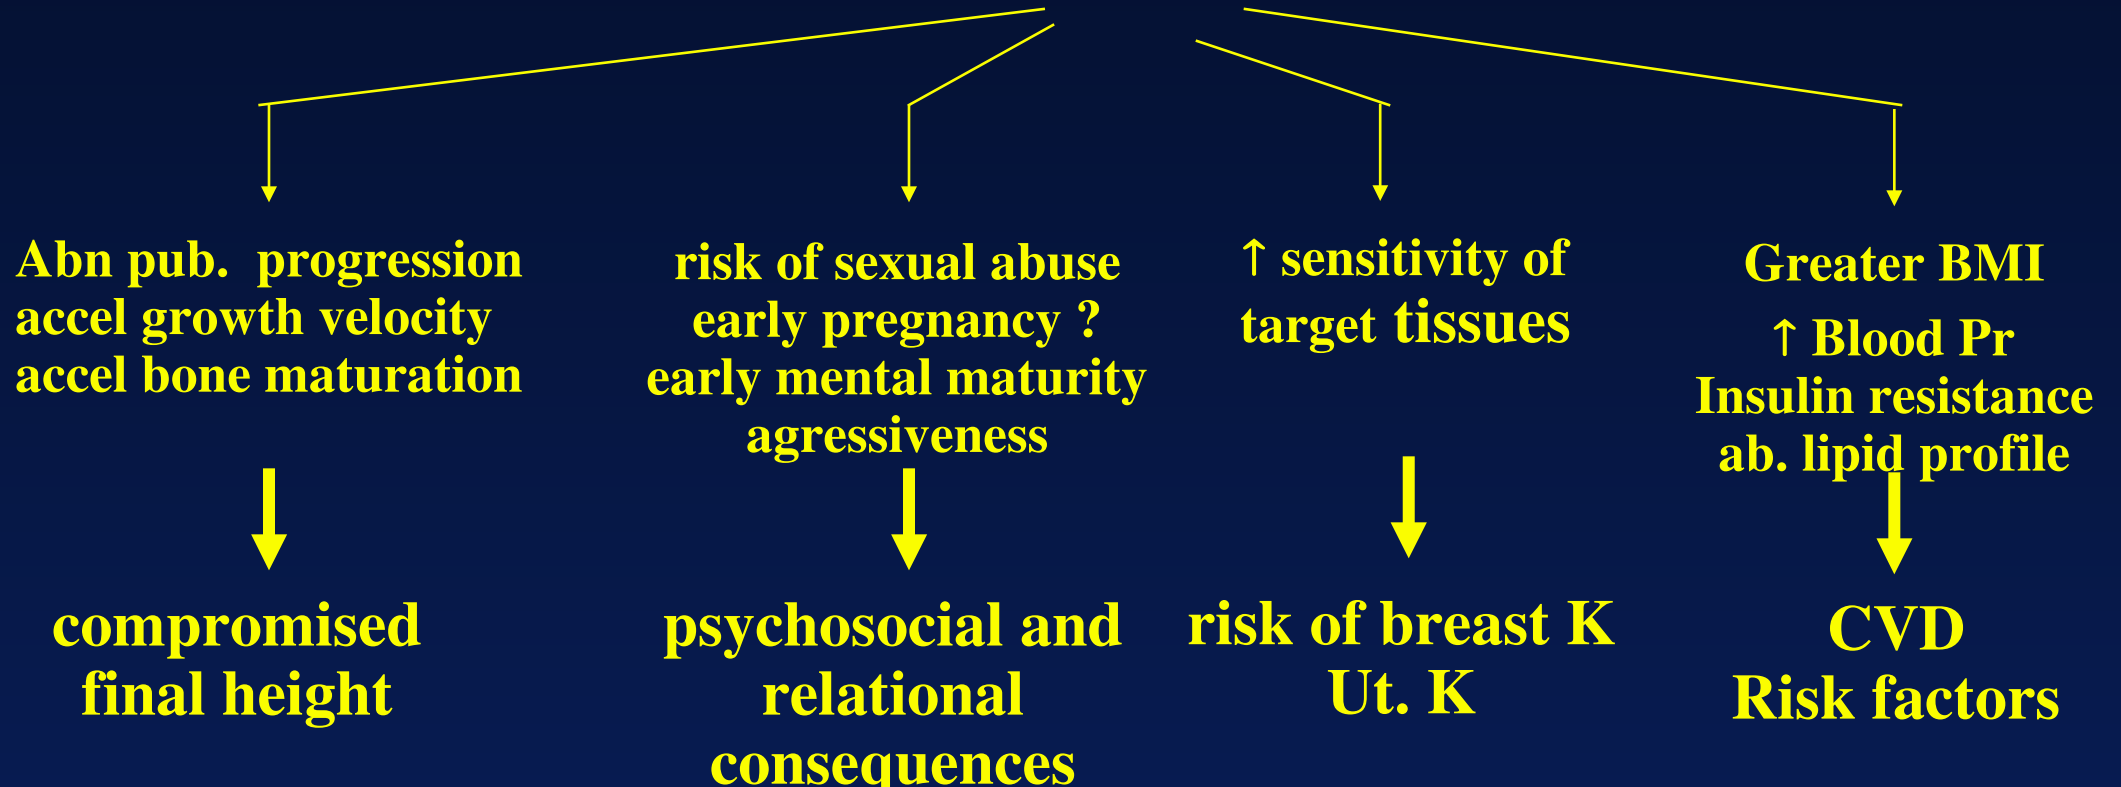
Premature exposure to estrogens



Diagnostic et traitement des pubertés précoces

Questions

1 - What are the physiological limits - When does pathology begin ?

2 - Complete (central),
incomplete (partial)
or peripheral precocious puberty ?

3 – Assessment of sexual precocity

4 – Diagnosis

5 – Management : optimizing the outcome

6 - Conclusions

Diagnostic et traitement des pubertés précoces

Questions

1 - What are the physiological limits - When does pathology begin ?

2 - Complete (central),
incomplete (partial)
or peripheral precocious puberty ?

3 – Assessment of sexual precocity

4 – Diagnosis

5 – Management : optimizing the outcome

6 - Conclusions

1 - What are the physiological limits - When does pathology begin ?

1 – Secular trends towards

- earlier breast development

- ie early onset of puberty

↳ have been observed during the 2nd past decades

2 – Continuing changes in environmental influences and interactions with genetic determination are involved in the pubertal process

3 – Pubertal process appears to be influenced by fetal life conditions

↳ Pubertal timing = an adaptative mechanism

1 - What are the physiological limits - When does pathology begin ?

Precocious puberty has traditionally been defined as the development of breasts < 8 years

= B_2 (Normal) ≈ 10.9 yrs

*** Herman-Giddens (17 000 girls) - B_2 : 10 yrs (white)**
9 yrs (black)

- 7% of white
- 27% of black
} **B2 < 8 y**

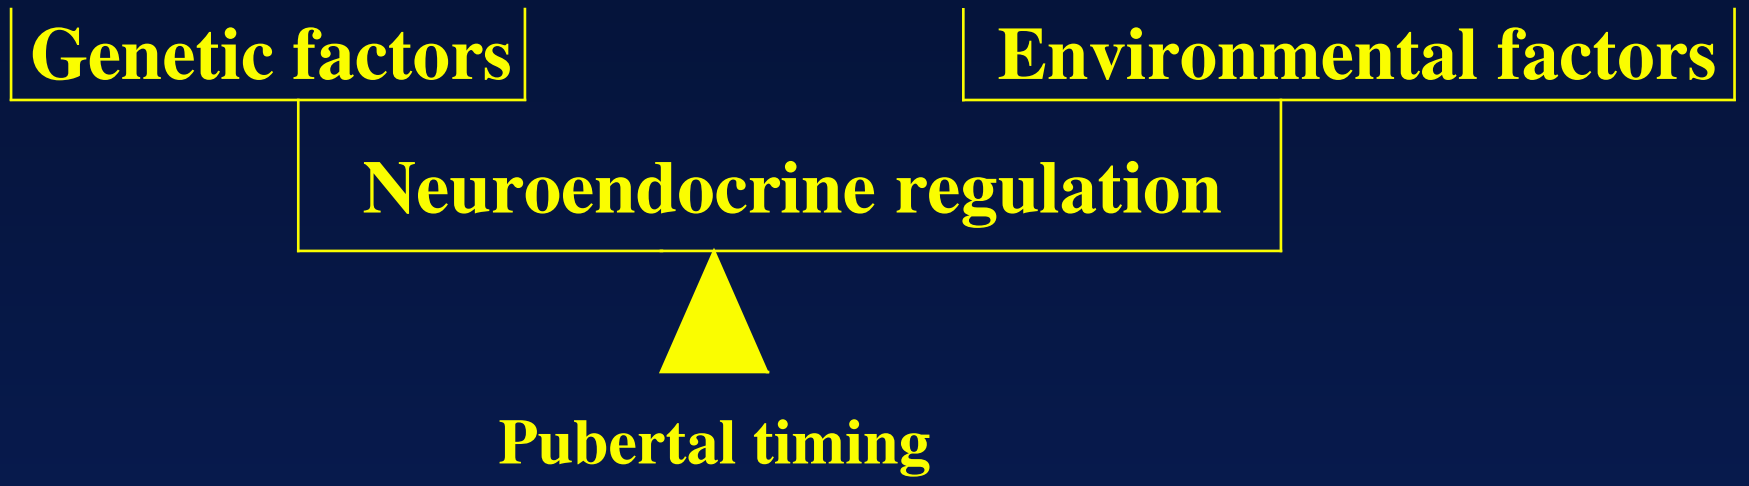
*** A. Juul (Denmark) - B_2 : 9.8 yrs**

*** G. Liu (China) - B_2 : 9.2 yrs**

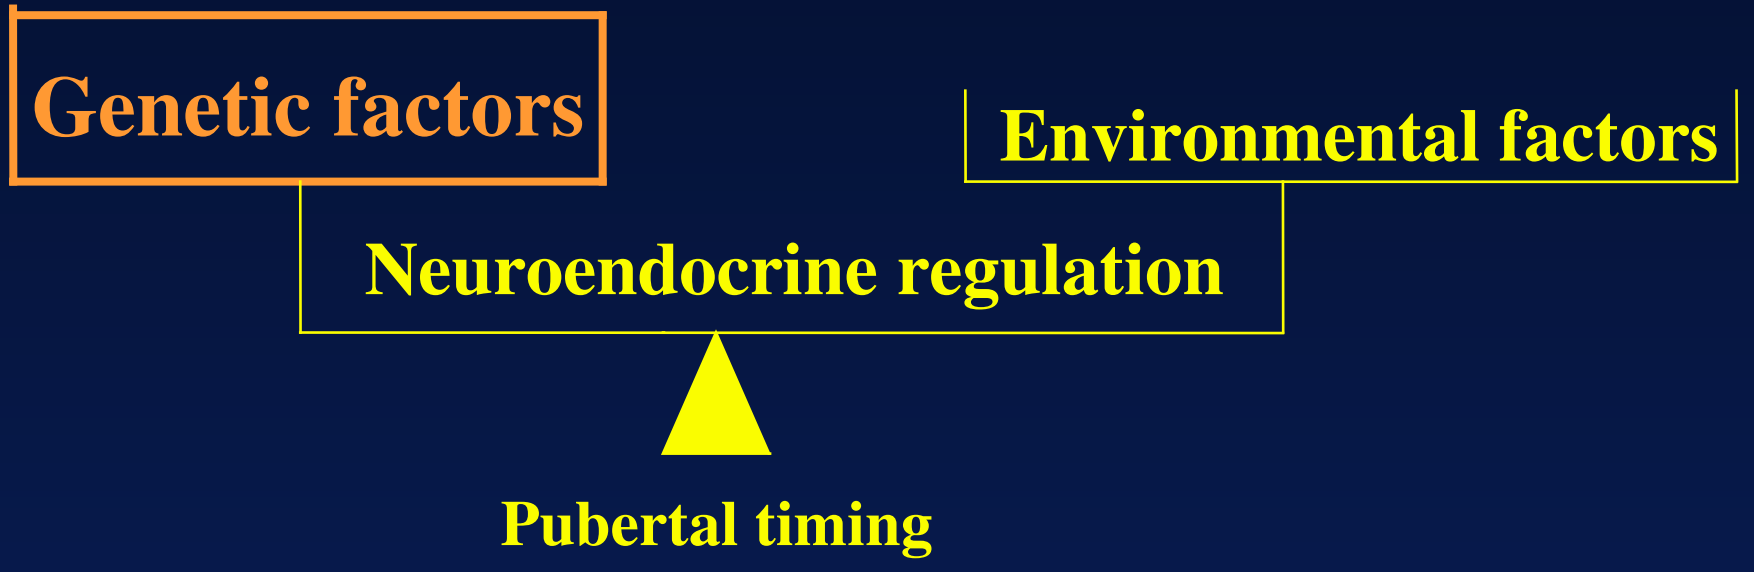
→ **Recommendations to change the age limits**

for precocious puberty to < 7 yrs in white girls ?
< 6 yrs in black girls ?

Diagnostic et traitement des pubertés précoces



Diagnostic et traitement des pubertés précoces



Genetic factors

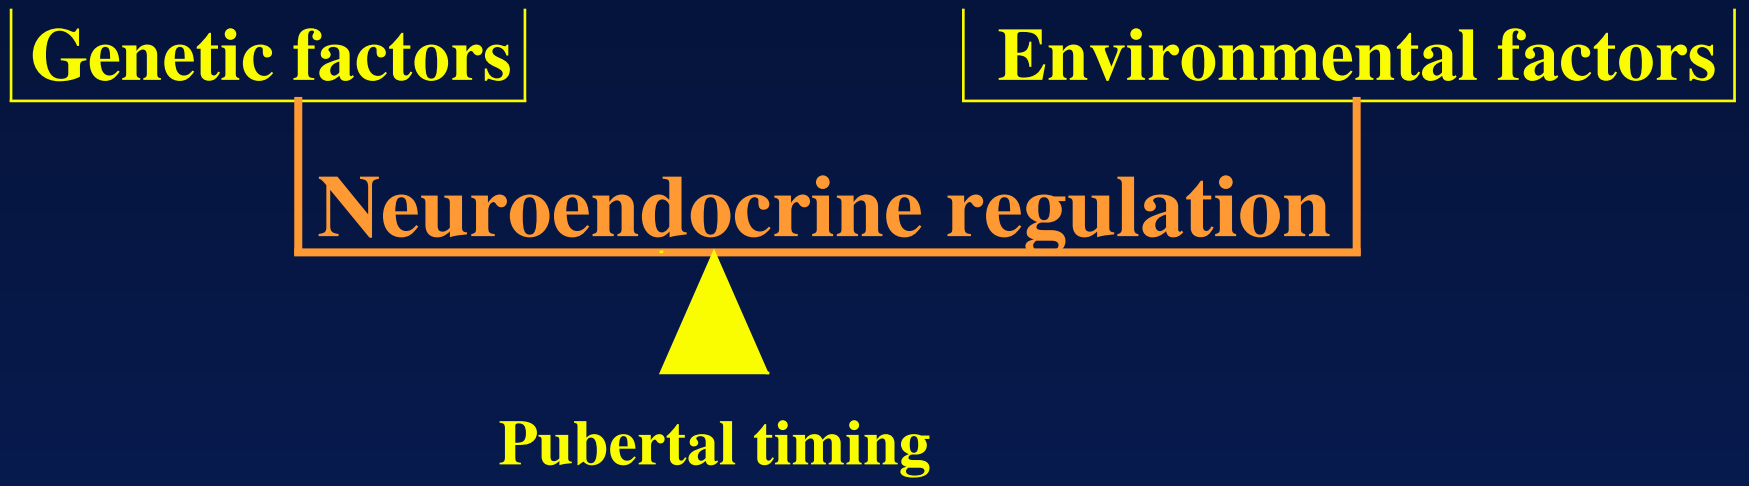
Evidence from genetic regulation (50 – 70%)

- racial / ethnic population groups
- families
- monozygotic vs dizigotic twins

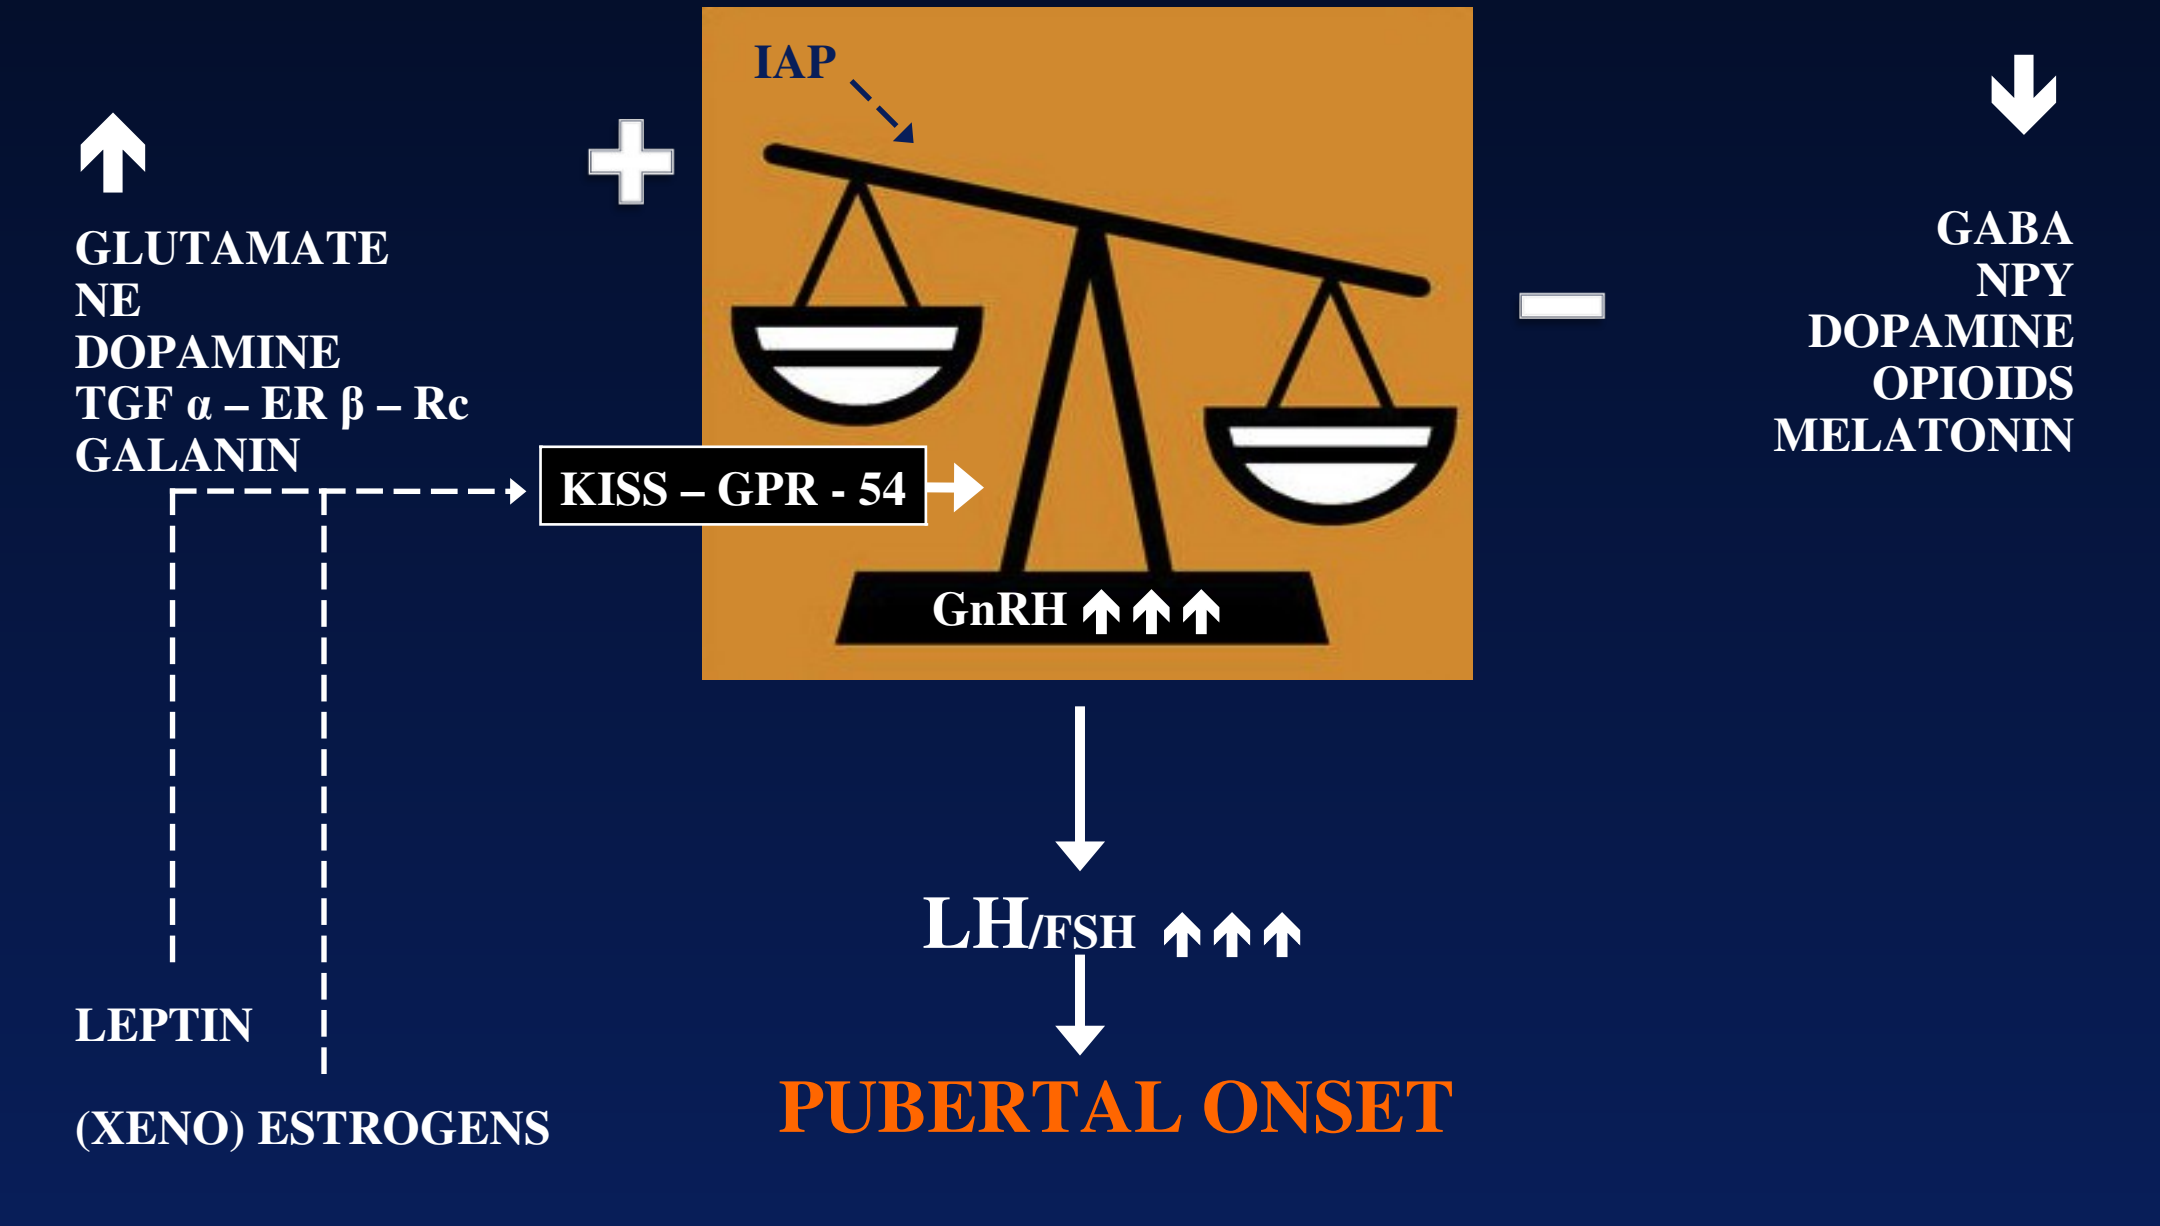
Identifying genetic factors

- resequencing of candidate genes
- genome-wide linkage analysis (22q11)
- Association studies (menarche = CYP17, COMT, ERα, SHBG, AR)
- single gene disorders (GnRH, GnRH-R, KAL, GPR-54, FGF-R1, PRO-K2, PRO-K2-Rc, LEP, LEP-Rc)

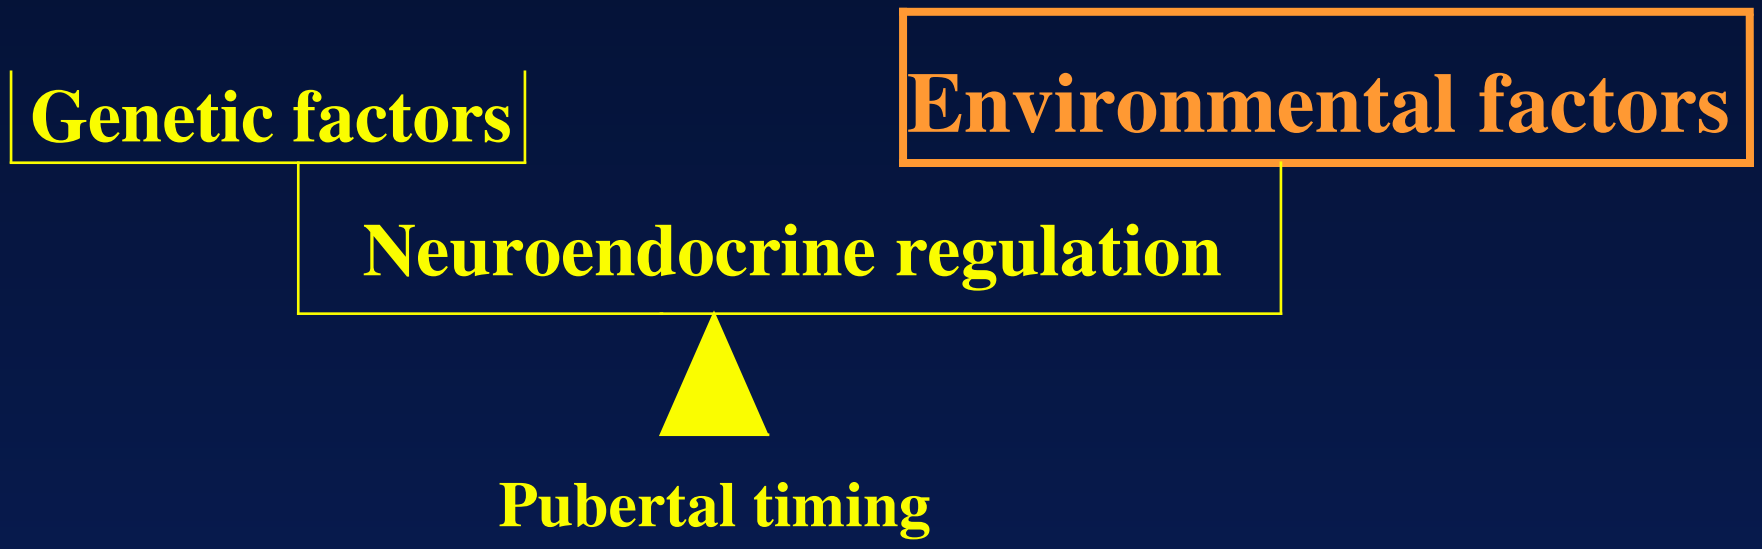
Diagnostic et traitement des pubertés précoces



Neuroendocrine regulation of Pubertal Onset



Diagnostic et traitement des pubertés précoces



Environmental factors

1 - Nutrition (post natal vs prenatal effects)

- early menarche / BMI ↑
- intra-uterine nutrition = IUGR + precocious pubarche / early puberty

- short stress ↑ onset of puberty

4 - Environmental endocrine disruptors

"increasing use of plastics, insecticides …. (environmental disrupting chemicals) should be investigated in relation to the earlier onset of puberty" M. Herman-GiddensPediatrics 1997, 99, 4, 505

Environmental factors

. Environmental endocrine disruptors

1 - Pesticides (DDT…), herbicides, fungicides …..

2 - PCB (coolants in transformers, electrical equipment)

3 – Plastics = Bisphenol A (plastic, chemicals, containers, …), Phtalates (surfactants for packaging, storing plasticisers, medical equipment, toys …. Solvents, detergents, cosmetics ….)

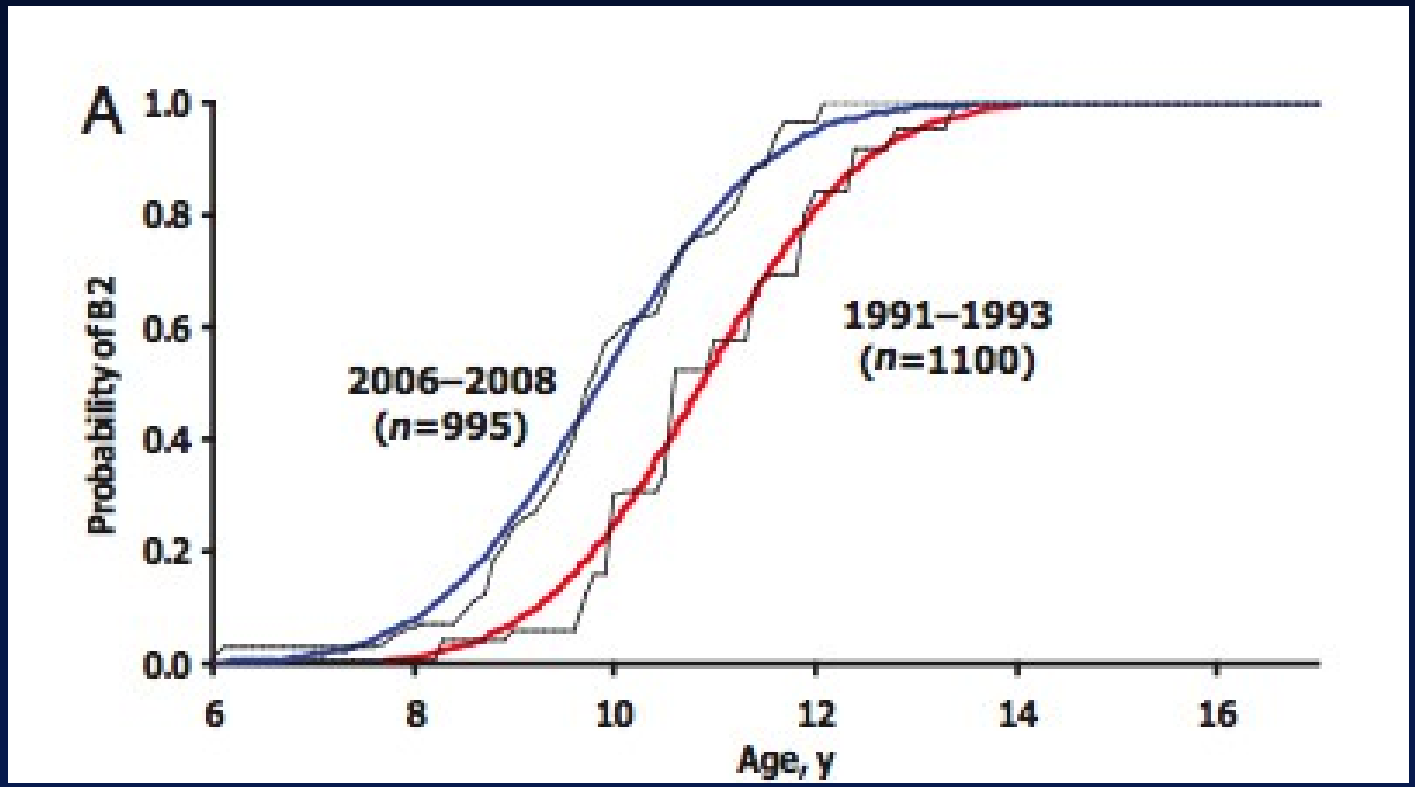
4 - Residual hormones (E2) in meat and milk …..

5 - Cosmetics, skin care products containing E2 : placenta)

6 - Phytoestrogens (soy formulas, soy milk …..)

Recent Decline in Age at Breast Development: The Copenhagen Puberty Study

Lise Aksglaede, MD[a], Kaspar Sørensen, MD[a], Jørgen H. Petersen, PhD[a,b], Niels E. Skakkebæk, MD, DMSc[a], Anders Juul, MD, DMSc[a]



Pediatrics, 2009

Pubertal Assessment Method and Baseline Characteristics in a Mixed Longitudinal Study of Girls

AUTHORS: Frank M. Biro, MD,[a] Maida P. Galvez, MD, MPH,[b] Louise C. Greenspan, MD,[c] Paul A. Succop, PhD,[d] Nita Vangeepuram, MD,[b] Susan M. Pinney, PhD,[d] Susan Teitelbaum, PhD,[b] Gayle C. Windham, PhD,[e] Lawrence H. Kushi, ScD,[f] and Mary S. Wolff, PhD[b]

RESULTS: The baseline cohort included 1239 girls. The proportion of girls who had attained breast stage 2 varied by age, race/ethnicity, BMI percentile, and site. At 7 years, 10.4% of white, 23.4% of black non-Hispanic, and 14.9% of Hispanic girls had attained breast stage ≥2; at 8 years, 18.3%, 42.9%, and 30.9%, respectively, had attained breast stage ≥2. The prime determinant of height velocity was pubertal status.

CONCLUSIONS: In this multisite study, there was substantial agreement regarding pubertal staging between examiners across sites. The proportion of girls who had breast development at ages 7 and 8 years, particularly among white girls, is greater than that reported from studies of girls who were born 10 to 30 years earlier.

. Environmental signals = chemical (EDCS)

Mechanisms of action

1 - Activation of transcription of estrogen-dependent genes

2 - Reduction of transcriptional activity induced by androgens

3 - Transcriptional repression of downstream genes

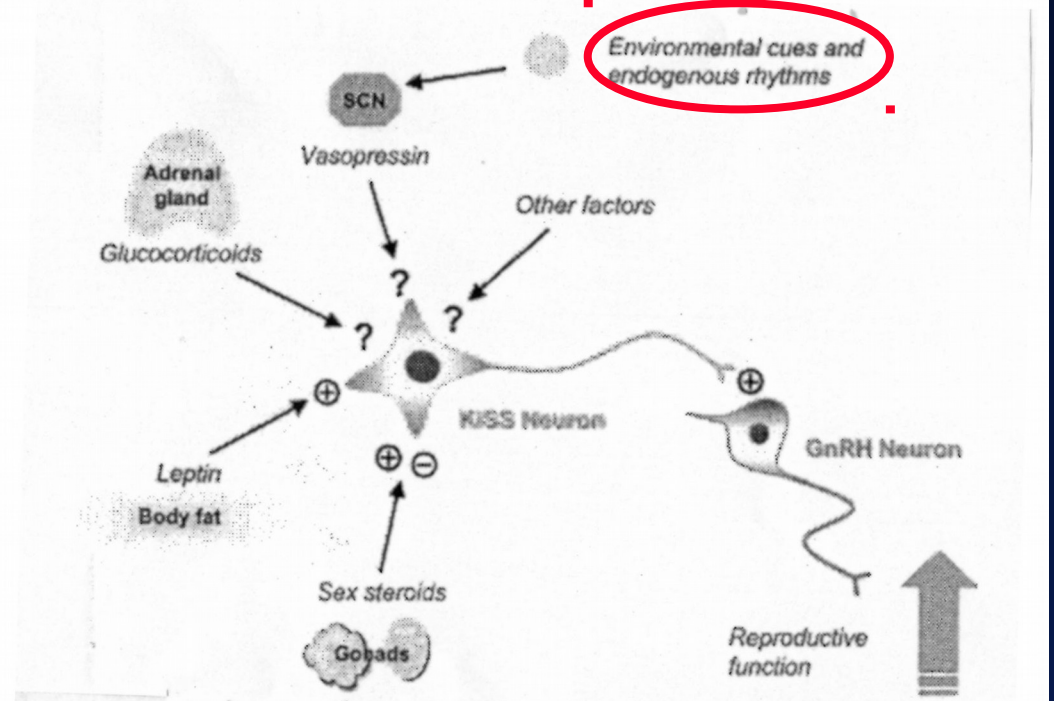
4 – Impact on the Kiss-GPR-54 system

5 - Oncogenic effect

6 - Transgenerational impact

7 - Adipose tissue +

Kisspeptin neurons as central processors in the regulation of GnRH secretion / onset of puberty



Kisspeptin neurons may act as central processors for relaying signals from the periphery to GnRH neurons. Metabolic and environmental factors regulate reproductive function, which ensures that reproduction proceeds only when metabolic and environmental conditions are favorable.

Diagnostic et traitement des pubertés précoces

2 – Environmental endocrine disruptors and early / precocious puberty

- animal studies
- in vitro data
- studies in human

3 – Consequences of earlier maturation of girls

4 - Conclusion

Diagnostic et traitement des pubertés précoces

Consequences of early maturation of girls

1 - Greater weight and BMI

2 – Insulin resistance

3 – Metabolic syndrome

4 - PCOS

5– Cardio-vascular diseases

6 – Breast cancer risk ++

Diagnostic et traitement des pubertés précoces

Consequences of early maturation of girls

1 – Lower self-esteem during adolescence
2 – Lower level of body satisfaction
3 – Greater likewood of depression
4 – Greater likewood of earling disorders
5 – Greater perceived stress
6 – Greater vulnerability to peer pressures
7 – Younger age of sexual initiation
8 – Younger age of smoking and drug use
9 – Lower life-long academic achievement

Precocious Puberty in Adolescent Girls: A Biomarker of Later Psychosocial Adjustment Problems

Line Tremblay, PhD
Laurentian University, Department of Psychology
Sudbury, Ontario, Canada
Jean-Yves Frigon, PhD
University of Montreal, Department of Psychology
Montreal, Quebec, Canada

Early maturing girls : at risk for

1 – psychosocial adaptation problems

2 – depression and anxiety

3 – problem behaviors / delinquency

4 – physical aggression, hostility, hyperactivity

5 – earlier sexual behaviors

6 – sex transmitted diseases

7 – pregnancy (↓ contraceptive methods)

Diagnostic et traitement des pubertés précoces

Premature exposure to estrogens

= therapy for precocious puberty depends first and foremost on the cause of hyperestrogenism

→ Medical / surgical suppression of hyperestrogenism

Diagnostic et traitement des pubertés précoces

Premature exposure to estrogens

1 - From peripheral origin

- MAS
- Granulosa cell tumor
- Environmental xenoestrogens

Diagnostic et traitement des pubertés précoces

Premature exposure to estrogens

1 - From peripheral origin **- MAS**

1 - cystectomy
2 - ovariectomy
3 - aromatase inhibitors
4 - anti-estrogens (estrogen antagonists)

Diagnostic et traitement des pubertés précoces

Premature exposure to estrogens

1 - From peripheral origin

- MAS

1 - cystectomy

- large ovarian cyst(s)
- early life
- isolated ppp

Diagnostic et traitement des pubertés précoces

Premature exposure to estrogens

1 - From peripheral origin

- granulosa cell tumor

→ Surgery

- tumorectomy
- ovariectomy

Diagnostic et traitement des pubertés précoces

Premature exposure to estrogens

1 - From peripheral origin

- environmental xenoestrogens

→ **Reduce inhalation**
ingestion
transdermal exposure to EDC !

Diagnostic et traitement des pubertés précoces

Premature exposure to estrogens

2 - From central origin

Diagnostic et traitement des pubertés précoces

Premature exposure to estrogens

2 - From central origin

- neurogenic (tumor) CPP

  - surgery
  - radiation
  - chemotherapy

Diagnostic et traitement des pubertés précoces

Premature exposure to estrogens

2 - From central origin **- idiopathic CPP**

*** indications for treatment**

1. Complete (and rapidly progressive) CPP
2. Abnormal height potential
   - height prediction < 3SD
   - height SDS for BA < -2

3 - Behavioral and psychological disturbances

Diagnostic et traitement des pubertés précoces

Premature exposure to estrogens

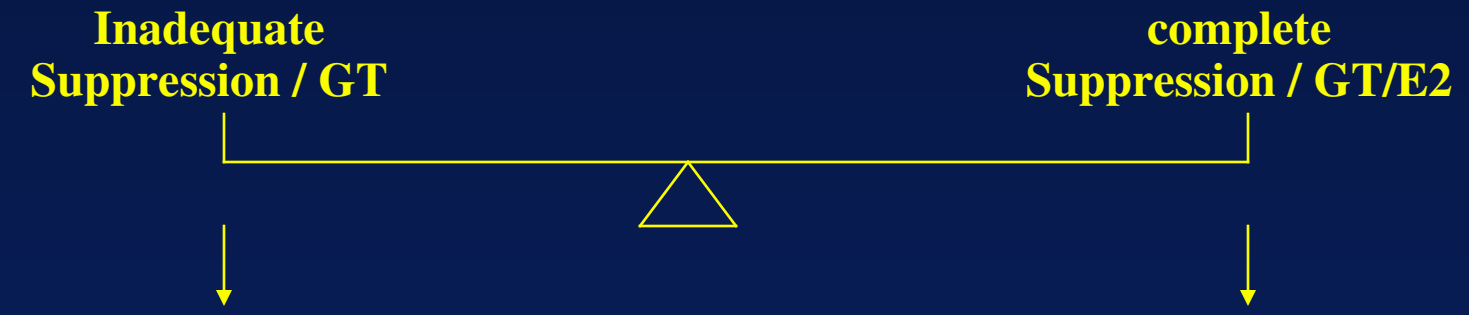
2 - From central origin **- idiopathic CPP**

2- Which regimen? (reliable suppression of GT, compliance)

3- When to start the treatment ?

4- When to stop the treatment ?

5- Long term outcomes ?



Diagnostic et traitement des pubertés précoces

Premature exposure to estrogens

2 - From central origin — **- idiopathic CPP**

1- Therapeutic option → **depot GnRH analogs (GnRHa)**

- **. one month**
- **. three months**
- **. One year**

regimens

→ **GnRHa + GH ?**

Diagnostic et traitement des pubertés précoces

Premature exposure to estrogens

2 - From central origin **- idiopathic CPP**

2- Which regimen ? ⟶

*** depot Leuprolide : the drug of choice**

. US : the recommended starting dose = 0.3mg.kg.month

7.5 mg ⟶ 15 mg / month

*** depot Leuprolide = 11.25 mg every 3 months (1 year)**

. France (2006) = suppression of the pit. ovarian axis

. US (2006) = suppression of the pit. ovarian axis

Diagnostic et traitement des pubertés précoces

Premature exposure to estrogens

2 - From central origin **- idiopathic CPP**

→

*** Histerelin Subdermal Implant (50 mg) / 1 year**

E. Eugster (2007) = excellent suppression of peak LH / E2 levels for 1 year

Diagnostic et traitement des pubertés précoces

Premature exposure to estrogens

2 - From central origin **- idiopathic CPP**

3- When to start the treatment ?

. 60 girls with CPP + GnRHa 3.75 mg / month

. Discontinuation of treatment
. CA : 11 - 11.5 y

. BA : 12 - 12.5
. GV < 4cm / y

38 diagnosed **CA > 6 - 8 yr**

Girls treated > 6 yr **. ↓ post-treatment height gain**
. compromised final height

Diagnostic et traitement des pubertés précoces

Premature exposure to estrogens

2 - From central origin - idiopathic CPP

4- When to stop the treatment ?

The policy of many (pediatric) endocrinologists is to interrupt GnRHa

at CA 11 - 11.5 yr
at BA 12 - 12.5 yr

→ to anticipate a similar percentage of residual height gain

<u>Question</u> : Should GnRHa treatment be withdrawn when BA closer to 11 that 12 y to allow a more robust post-treatment growth spurt ?

Diagnostic et traitement des pubertés précoces

Premature exposure to estrogens

2 - From central origin - idiopathic CPP

5- Long term outcomes ? (PASQUINO, JCEM, 2008)

1. Impact on adult height = m 161 cm (-4cm / TH)

2. Impact on BMI = overweight (14.3%), obese (9.1%)

3 - Impact on BMD = lower than control (lumbar spine) during treatment

> complete resumption of gonadal activity = mean BMD = N

4 - Reactivation of the gonadotropic axis > 3 - 4 months

menarche = 1 y

Diagnostic et traitement des pubertés précoces

Questions

1 - What are the physiological limits - When does pathology begin ?

2 - Complete (central),
incomplete (partial)
or peripheral precocious puberty ?

3 – Assessment of sexual precocity

4 – Diagnosis

5 – Management : optimizing the outcome

6 - Conclusions

Diagnostic et traitement des pubertés précoces

Conclusion (1)

1. Starting treatment > 6 y : worsen final height ?
2. Stopping treatment : BA < 12 : increase post treatment growth spurt ?
3. Should regimen be modulated (f.) : -growth response ?
   - pubertal response ?
4 - How much should psychological problems be taken into consideration for treatment decision ?
5 - Any consensus or individualized treatment ?

Diagnostic et traitement des pubertés précoces

Conclusion (2)

- Female precocious puberty is very common.

- It is difficult to know how far to push the investigations.

- Sometimes it is within the physiological limits and sometimes it is an early sign of underlying pathology.

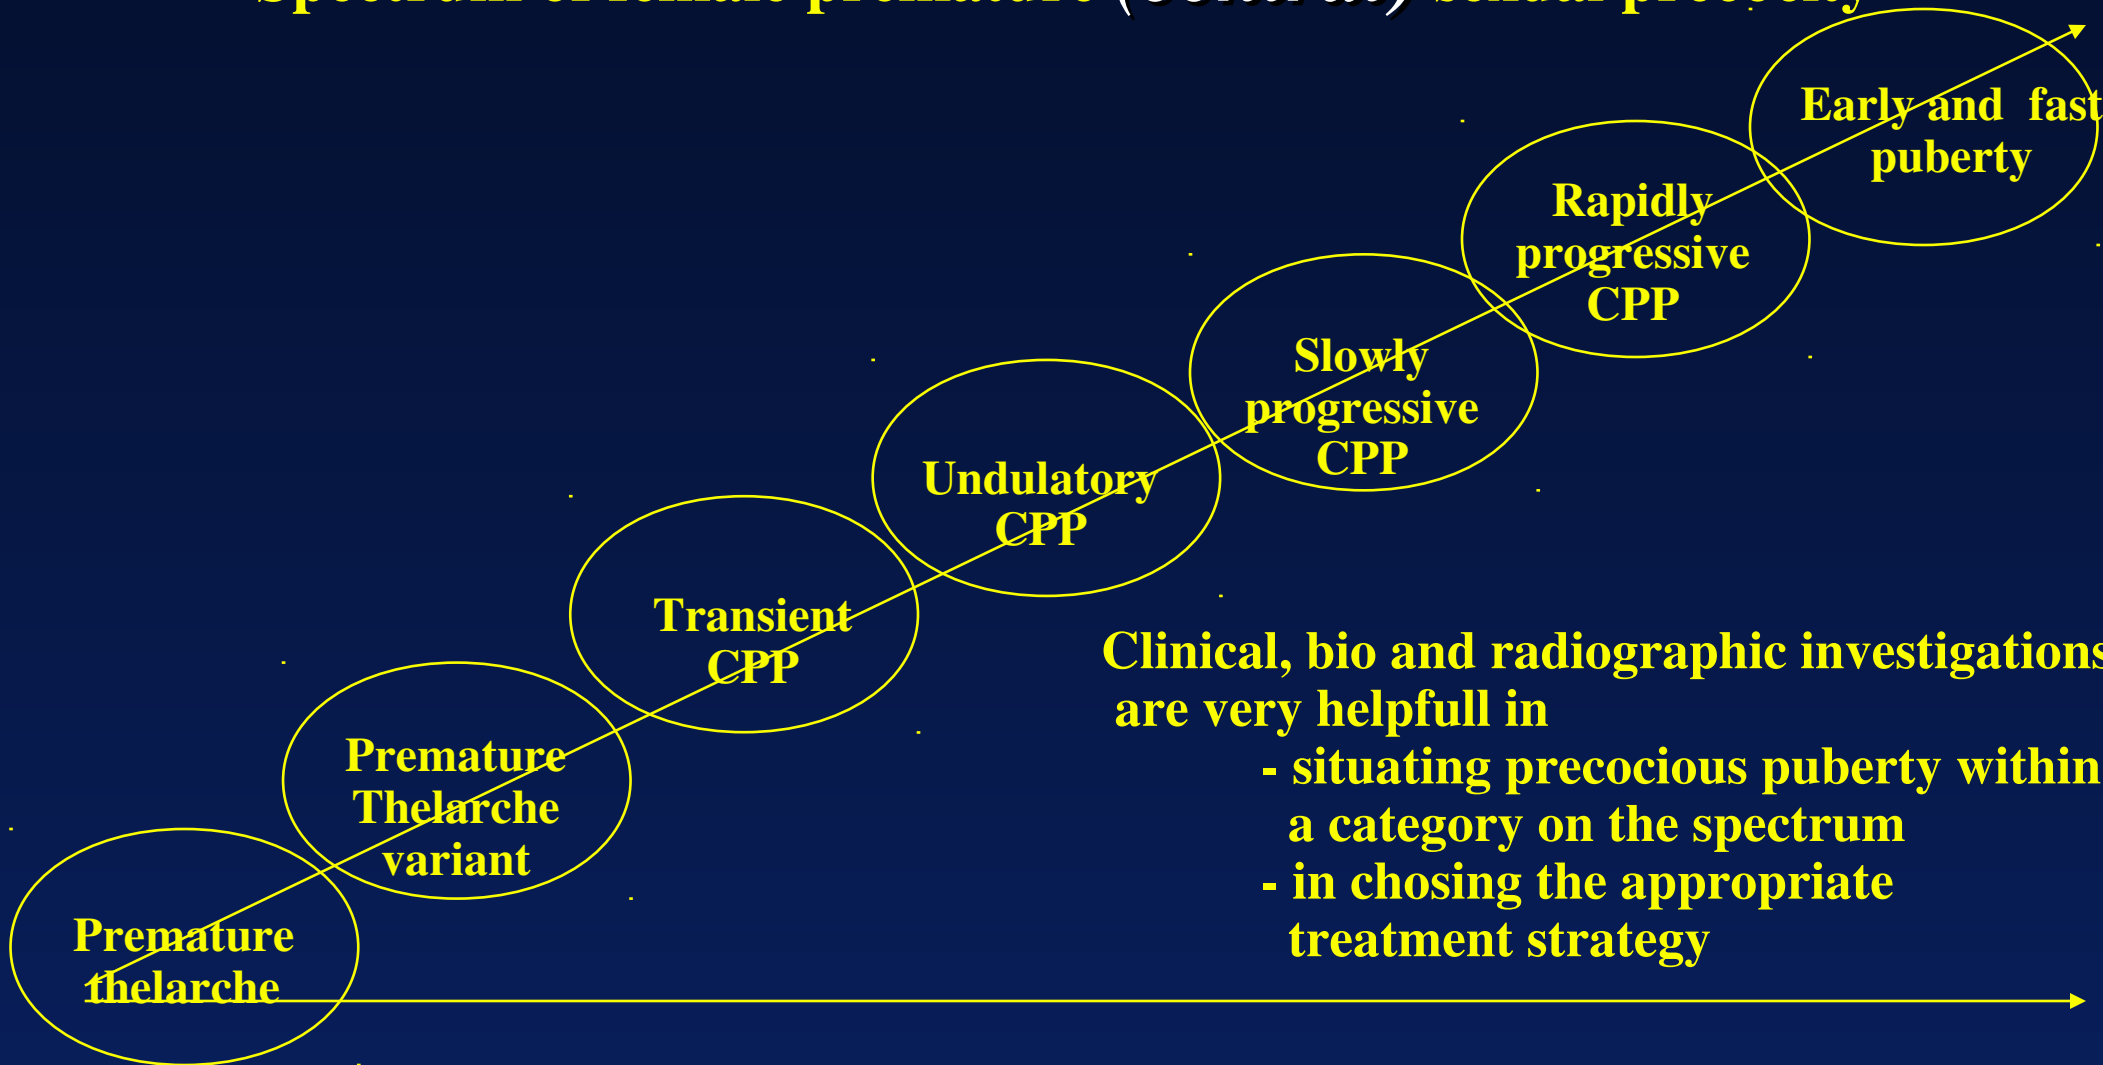
- (Pediatric) Endocrinologists and Gynecologists do have the key role in determining a realistic strategy of investigation.

- Central and peripheral puberty cover a very wide spectrum.

Diagnostic et traitement des pubertés précoces

Conclusion (3)

Spectrum of female premature *(central)* sexual precocity



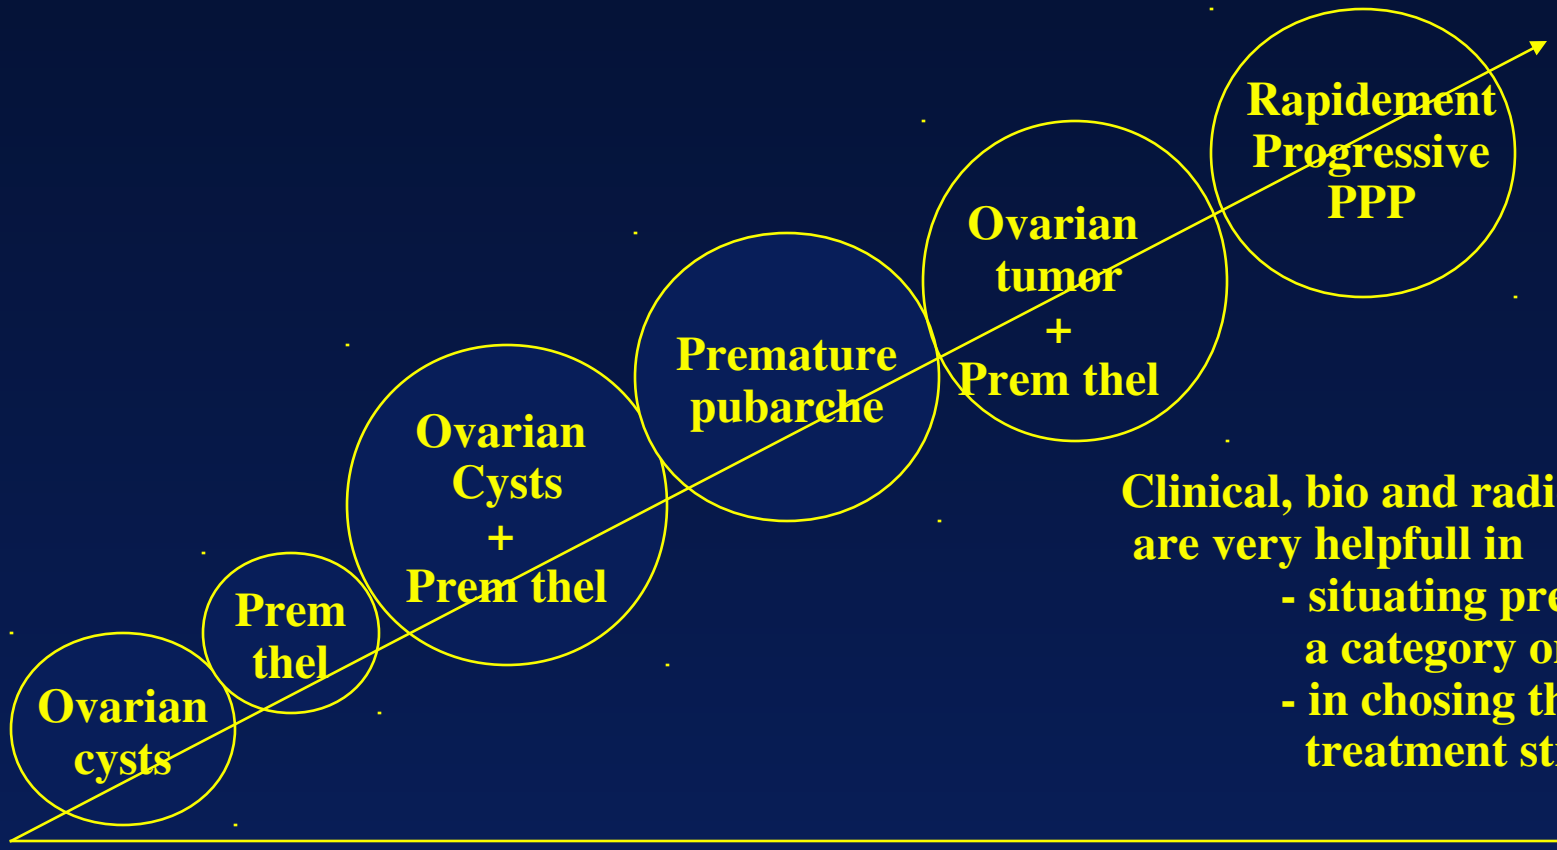
Clinical, bio and radiographic investigations are very helpfull in

- situating precocious puberty within a category on the spectrum
- in chosing the appropriate treatment strategy

Diagnostic et traitement des pubertés précoces

Conclusion (4)

Spectrum of female *peripheral* sexual precocity



Clinical, bio and radiographic investigations are very helpfull in

- situating precocious puberty within a category on the spectrum
- in chosing the appropriate treatment strategy

Conclusion (5)

Algorithm evaluation of girls with sexual precocity
